Critical Appraisal of Research Papers/Reports

Introduction to Statistics Course Feb 25th, 2016 Presenter: John Ojal

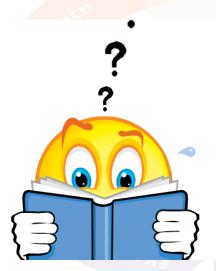

Objectives

- Effective Reading and Assessing Flaws
- Standard appraisal questions
- Questions specific to the study designs
- Group work/review exercise (4 papers)
- Summary/questions

Steps for effective reading

Questions to ask when reading a paper

- 1. Is it of interest?
- 2. Why was it done?
- 3. How was it done?
- 4. What has it found?
- 5. What are the implications?
- 6. What else is of interest?

Appraising Cross-sectional Studies

- Is the design appropriate for the stated objectives?
- Who was studied?
- Mow was the sample obtained?
- What was the response rate?
- Mow could selection bias arise?
- Were the findings chance?
- Can the results be generalized?

Appraising Case-control studies

- Is the design appropriate for the stated aims?
- 2 How were the cases obtained?
- Is the control group appropriate?
- Oata collected same way for cases and controls?
- Where are the biases?
- Oculd there be confounding?

Appraising Cohort Studies

- Is the design appropriate for the stated objectives?
- Who exactly has been studied?
- Was a control group used? Should one have been used?
- 4 How adequate was the follow up?
- Is the design appropriate to the stated aims?
- Was exposure/intervention accurately measured?
- O Did analysis allow for the passage of time?
- What else might influence the outcome?

Appraising Clinical Trials

- Is the design appropriate for the stated objectives?
- Were treatments randomly allocated?
- Were all the patients accounted for?
- Were outcome assessments blind?
- 6 How was randomization carried out?
- Treatment groups comparable at baseline?
- Protocol deviations reported?
- Results analysed by intention to treat?

Additional resources

- STrengthening the Reporting of OBservational studies in Epidemiology (STROBE)
- Consolidated Standards of Reporting Trials (CONSORT)
- Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA)

Summary

- Different study designs attract different appraisal criteria
- There are a number of structured checklists that you can use to aid your appraisal
- Also use your wider knowledge of conceptual, methodological and practical issues in epidemiological research to inform your evaluation.

Appraisal tasks (Group work)

Cross-sectional study paper for review

Neal KR, Hebden J, Spiller R. *Prevalence of gastrointestinal symptoms six months after bacterial gastroenteritis and risk factors for development of the irritable bowel syndrome: postal survey of patients.* British Medical Journal (1997) 314: 779-7821.

Cohort study paper for review

Rosenblatt et al. Oral contraceptives and the risk of all cancers combined and site-specific cancers in Shanghai. Cancer Causes Control. 2009 February; 20(1): 27–34

Appraisal tasks (Group work)

Clinical trial paper for review

M Svendsen, R Blomhoff, I Holme and S Tonstad *The effect of an increased intake of vegetables and fruit on weight loss, blood pressure and antioxidant defense in subjects with sleep related breathing disorders.* European Journal of Clinical Nutrition (2007) 61, 1301–1311

Case control study paper for review

Comba P, Barbieri PG, Battista G et al. *Cancer of the nose and paranasal sinuses in the metal industry: A case-control study.* British Journal of Industrial Medicine (1992) 49: 193-196.
